The following spring to mind when looking at the community engagement plan.

1. How about engaging those who have lost their businesses due to rampant expansion by the salmon industry over the past four decades eg oyster farmers around Dover.
2. How about the impact over the loss of whitebait fisheries in the southern rivers over the past two decades?
3. How about the loss of recreational fishing amenity with the loss of the sea run trout fishery in the Lune and Esperance rivers?
4. How about the loss to tourism operators with views and ambience being destroyed by corporate greed throughout the channel?

Thanks for the opportunity to comment
